
$\qquad$
$\qquad$

## Objectives

$\qquad$

- Identify the limiting reagent and $\qquad$ excess reagent in a reaction
- Calculate the amount of product produced $\qquad$
- Determine the amount of ER left over $\qquad$
$\qquad$
$\qquad$

## Limiting Reagent

- An insufficient quantity of any reactant will limit the amount of product formed
- Example: Two slices of bread and a whole jar of peanut butter-you can only make one sandwich because $\qquad$ you are limited by the bread

$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\mathrm{N}_{2}+3 \mathrm{H}_{2} \rightarrow 2 \mathrm{NH}_{3}$
- If you have 2.0 moles of nitrogen reacting with 4.0 moles of hydrogen,
$\qquad$ which reagent is limiting?
- Which reagent is in excess?
- How much $\mathrm{NH}_{3}$ will form?
- How much excess reagent will be left over?
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$2 \mathrm{Cu}+\mathrm{S} \rightarrow \mathrm{Cu}_{2} \mathrm{~S}$
- 80.0 g Cu reacts with 25.0 g S
- What mass of copper (I) sulfide will $\qquad$ be produced?
- What is the limiting reagent?
- What is the excess reagent?
- How much excess reagent will be left over?

|  |
| :--- |
| $\mathrm{CaCO}_{3}+2 \mathrm{HCl} \rightarrow \mathrm{CaCl}_{2}+\mathrm{CO}_{2}+\mathrm{H}_{2} \mathrm{O}$ |
| - If 100 . grams of both reagents are |
| available, which is the limiting |
| reagent? |
| - How much calcium chloride will be |
| formed? |
| - What mass of excess reagent will be |
| left over? |
