## Percent Yield Worksheet

1) Write the equation for the reaction of iron (III) phosphate with sodium sulfate to make iron (III) sulfate and sodium phosphate.
2) If I perform this reaction with 25 grams of iron (III) phosphate and an excess of sodium sulfate, how many grams of iron (III) sulfate can I make?
3) If 18.5 grams of iron (III) sulfate are actually made when I do this reaction, what is my percent yield?
4) Is the answer from problem \#3 reasonable? Explain.
5) If I do this reaction with 15 grams of sodium sulfate and get a $65.0 \%$ yield, how many grams of sodium phosphate will I make?

## Percent Yield Worksheet

1) Write the equation for the reaction of iron (III) phosphate with sodium sulfate to make iron (III) sulfate and sodium phosphate.

$$
2 \mathrm{FePO}_{4}+3 \mathrm{Na}_{2} \mathrm{SO}_{4} \rightarrow 1 \mathrm{Fe}_{2}\left(\mathrm{SO}_{4}\right)_{3}+2 \mathrm{Na}_{3} \mathrm{PO}_{4}
$$

2) If I perform this reaction with 25 grams of iron (III) phosphate and an excess of sodium sulfate, how many grams of iron (III) sulfate can I make?

## 33 grams

3) If 18.5 grams of iron (III) sulfate are actually made when I do this reaction, what is my percent yield?

$$
(18.5 / 33) \times 100 \%=56 \%
$$

4) Is the answer from problem \#3 reasonable? Explain.

Yes. Any yield under 100\% is reasonable under the law of conservation of mass.
5) If I do this reaction with 15 grams of sodium sulfate and get a $65.0 \%$ yield, how many grams of sodium phosphate will I make?

According to the stoichiometry, the theoretical yield is 11.5 grams. Multiplying this by 0.650 , you get 7.48 grams.
