

Noble gases

1. What elements make up this group?
2. What are some of the properties of elements in this group?
3. Name one thing that is unique about the elements in this group.

Transition metals

1. What elements make up this group?
2. What are some of the properties of elements in this group?
3. Name one thing that is unique about the elements in this group.

Nonmetals

1. What elements make up this group?
2. What are some of the properties of elements in this group?
3. Name one thing that is unique about the elements in this group.

Lanthanides

1. What elements make up this group?
2. What are some of the properties of elements in this group?
3. Name one thing that is unique about the elements in this group.

Actinides

1. What elements make up this group?
2. What are some of the properties of elements in this group?
3. Name one thing that is unique about the elements in this group.

Alkali metals

1. What elements make up this group?
2. What are some of the properties of elements in this group?
3. Name one thing that is unique about the elements in this group.

Alkaline earth metals

1. What elements make up this group?
2. What are some of the properties of elements in this group?
3. Name one thing that is unique about the elements in this group.

Halogens

1. What elements make up this group?
2. What are some of the properties of elements in this group?
3. Name one thing that is unique about the elements in this group.

Metalloids

1. What elements make up this group?
2. What are some of the properties of elements in this group?
3. Name one thing that is unique about the elements in this group.

Metals

1. What elements make up this group?
2. What are some of the properties of elements in this group?
3. Name one thing that is unique about the elements in this group.
